

FDE-Associate Foundation Exam

Application-Based MCQ Practice Set

35 Exam-Style Questions | Scenario-Based | Two-Selection | Table-Based

Source: Just Delegate It: A Crash Course — The AI Agent Factory

Section A — Scenario-Based MCQs (1–20)

1. A project lead asks an assistant to research three training courses and tell which is best. The lead wants a result that can be handed to a colleague without repeating the research.

The assistant instead returns general advice and search suggestions. The lead wants the assistant to own the first-pass work while the lead retains the final check.

Which change best turns the request into a delegated job?

- A. Ask how to research courses
- B. Ask for a finished comparison table with required fields and links
- C. Give exactly five search steps
- D. Ask for a narrative of what the lead should do

Correct Answer: B

2. A team repeatedly asks an assistant for weekly course information, but must decide the output structure afterward. They want the assistant to perform the recurring first pass while the team checks important claims.

They do not want to prescribe every click because useful sources may change.

Which instruction best follows the outcome-first approach?

- A. Specify every search site and click order
- B. Specify the desired finished result and leave the method to the assistant
- C. Give only the topic and let the assistant choose the deliverable
- D. Require the exact previous procedure

Correct Answer: B

3. An FDE is preparing a brief to compare implementation courses. The desired result and output format are stated, but the assistant does not know the FDE's experience level or weekly time limit.

The FDE also has not stated what the assistant may decide independently.

Which pair of brief elements fills these gaps?

- A. Context and Authority
- B. Constraints and Deliverable
- C. Outcome and Verification
- D. Deliverable and Outcome

Correct Answer: A

4. A procurement analyst asks for the current price and enrollment status of a course. The response contains confident figures, but one figure has no openable source.

The analyst needs information that is true now rather than remembered information.

What is the appropriate next verification action?

- A. Accept because it sounds current
- B. Ask only whether the assistant is confident
- C. Open a supporting page, find the supporting sentence, and check its date
- D. Replace the task with a general summary

Correct Answer: C

5. An FDE supplies a policy excerpt and asks an assistant to answer using only that excerpt. The assistant answers one question with plausible information not stated in the text.

The FDE wants every answer traceable to the supplied source.

Which instruction most directly prevents this failure?

- A. Use only the supplied text and quote the sentence used
- B. Use the text first, then fill gaps from memory
- C. Summarize without preserving support
- D. Answer even when the source is silent

Correct Answer: A

6. A compliance team asks an assistant to turn a chat answer into a document. The chat contains two items marked unverified, but the polished document removes those labels.

The team needs the artifact to preserve the caveats from the working answer.

What should the deliverable instruction require?

- A. A shorter document with fewer qualifications

- B. The named form plus preservation of every unverified mark
- C. A narrative instead of the original structure
- D. Removal of caveats for readability

Correct Answer: B

7. An assistant is asked to prepare a website draft. The FDE wants it built but not created or published until explicit approval.

The assistant may choose routine implementation details inside that boundary.

Which authority statement best matches the intended delegation?

- A. Publish if it looks correct
- B. Build and publish, then report
- C. Build and show it; do not create or publish until approval
- D. Ask about every implementation detail

Correct Answer: C

8. A department runs the same report weekly. The same background sources and standing rule are repeatedly pasted into new chats.

The team wants to reduce repeated setup without treating stored context as automatically correct.

What is the source-based reason to consider a Project?

- A. Projects guarantee correctness
- B. Projects store recurring knowledge and standing instructions so chats start informed
- C. Projects replace current verification
- D. Projects are mandatory for every repeated task

Correct Answer: B

9. An assistant produces a report with the wrong language for its audience. The rest is structurally sound, and the audience was stated in the outcome.

The FDE wants the smallest intervention rather than a full rewrite.

Which intervention is appropriate?

- A. Correct: name the error and replacement
- B. Redirect: give a different general direction
- C. Escalate immediately
- D. Take the job back

Correct Answer: A

10. An assistant is moving toward the wrong type of comparison, but no factual error has occurred. The FDE wants to steer it before completion.

Repeating the complete job would add unnecessary instruction.

Which intervention fits the guidance?

- A. Correct the final answer
- B. Redirect by naming the desired direction
- C. Reject immediately
- D. Change the requirement silently

Correct Answer: B

11. An assistant repeatedly fails a multi-step calculation after targeted corrections. The task is important and needs more reasoning than the current run demonstrates.

A stronger reasoning setting is available, or the job can be split into smaller checked steps.

What is the supported next move?

- A. Repeat the same correction
- B. Escalate capability or make the job smaller and check each step
- C. Delete the brief
- D. Accept because it is formatted

Correct Answer: B

12. An assistant claims, "I corrected the table exactly as requested." The FDE is reviewing a high-impact result and the claim is the only evidence offered.

The course emphasizes checking the actual output rather than the assistant's statement.

What should the FDE do?

- A. Trust the claim
- B. Ask for a promise
- C. Inspect the corrected table itself
- D. Restart the project

Correct Answer: C

13. A manager must choose which AI-generated claims deserve detailed checking. One is minor internal wording; another is a financially material calculation used in a client-facing report. Review time is limited, so effort should go where an error matters most. Which item should receive stronger review?

- A. Internal wording
- B. Financially material client-facing calculation
- C. Whichever appears first
- D. Both must receive identical depth

Correct Answer: B

14. An FDE traces a current course price. The response has a link, but the linked page lacks the supporting sentence and is older than the relevant date.

The FDE is applying the verification method rather than treating a citation as proof. Which conclusion is appropriate?

- A. The citation verifies it
- B. The URL itself proves it
- C. Evidence is insufficient; further source/date checking is needed
- D. Accept because prices rarely change

Correct Answer: C

15. A team has corrected the same AI result three times. Each revision improves it less than the previous one, and the subject needs specialist judgment.

The team is considering another prompt.

What does this pattern indicate?

- A. Keep adding prompt detail
- B. Raise the reviewer level and involve someone who knows the field
- C. Remove verification
- D. Switch assistants and accept the next output

Correct Answer: B

16. An FDE is preparing a final client deliverable produced with AI. The content looks clean and the run has been stable.

The course identifies outputs that always require a named person to read them before release.

What should happen?

- A. Release automatically
- B. Have a named person review the final client deliverable
- C. Let AI decide whether review is needed
- D. Check only formatting

Correct Answer: B

17. A team compares two assistants using the same six-line brief. They record completion, message count, authority handling, unverified marking, and deliverable differences.

They want to understand what happened in those runs rather than create a permanent ranking.

Which conclusion is consistent with the source?

- A. The results establish a permanent ranking
- B. The observations describe the runs without creating a lasting ranking
- C. The faster assistant must replace the other
- D. Any difference proves the brief is defective

Correct Answer: B

18. An FDE connects an assistant to a system containing operational data. Before allowing action, the FDE wants the source's four pre-access questions.

The concern is that access could exceed what the job requires.

Which set matches the source?

- A. What may it read, what may it do, can its information source be trusted, and is access allowed?
- B. Which model is fastest, newest, cheapest, and most popular?
- C. How many prompts, tokens, users, and ratings?
- D. What browser, file type, color, and step count?

Correct Answer: A

19. A weekly AI job produces a different course price than the previous run. The brief did not change, and the FDE is unsure whether AI behaved differently or the real-world price changed.

The source recommends distinguishing changes in the world from changes in AI behavior.

What is the best next step?

- A. Assume inconsistency and rewrite

- B. Open the relevant page and compare runs with dates
- C. Choose the newer answer because it is always right
- D. Ignore the difference

Correct Answer: B

20. An FDE runs the same six-line brief in a second assistant without modification. The deliverable differs slightly, so the FDE records what happened and verifies one claim using the same method.

Why is this test useful?

- A. It proves permanent superiority
- B. It tests whether the brief describes the job well enough to travel across tools
- C. It removes human verification
- D. It guarantees identical outputs

Correct Answer: B

Section A — Answer Key

1. B 2. B 3. A 4. C 5. A 6. B 7. C 8. B 9. A 10. B 11. B 12. C 13. B 14. C 15. B 16. B 17. B 18. A 19. B 20. B

Section B — Two-Selection MCQs (21–28)

21. A team wants a delegation brief that gives an assistant enough structure while preserving human control. The job involves current information and a finished table.

The team wants to make the final acceptance decision themselves.

Select TWO options.

- A. State what result should exist
- B. Tell the assistant every click
- C. State what the assistant may decide without asking
- D. Let the assistant decide final fitness

Correct Answer: A & C

22. An FDE verifies a claim about a course that may have changed. The assistant supplied a URL and date, but the FDE wants to verify the evidence.

Select TWO options.

- A. Open the cited page
- B. Accept because a URL was supplied
- C. Find the sentence supporting the claim
- D. Ignore the date

Correct Answer: A & C

23. A policy excerpt is supplied with a source-restricted task. Every answer must remain traceable to supplied material.

Select TWO options.

- A. Tell the assistant to use only the supplied text
- B. Tell it to quote the sentence used
- C. Fill gaps from general knowledge
- D. Answer even when silent

Correct Answer: A & B

24. A team turns a chat result into a reusable document. The chat contains caveats and unverified items.

Select TWO options.

- A. Specify the desired document form
- B. Preserve every unverified mark
- C. Remove caveats
- D. Treat the chat answer as sufficient

Correct Answer: A & B

25. An assistant may eventually reach a real system. The FDE wants authority boundaries that preserve review and prevent irreversible actions without approval.

Select TWO options.

- A. Research, but do not purchase
- B. Inspect, but do not delete
- C. Publish first and report
- D. Delete whenever efficient

Correct Answer: A & B

26. A recurring report uses the same background and output shape. Staff repeatedly paste the same source and standing rule.

Select TWO options.

- A. Store recurring source material as Project knowledge
- B. Store recurring rules as Project standing instructions
- C. Put all current facts into permanent knowledge
- D. Stop verifying because the Project is trusted

Correct Answer: A & B

27. An assistant has drifted, and the FDE wants the smallest effective intervention. One factual line is wrong while the rest is on track.

Select TWO options.

- A. Name the error and replacement
- B. Rewrite the entire brief
- C. Check the corrected line in the actual result
- D. Escalate before inspecting

Correct Answer: A & C

28. A result contains several claims, but review time is limited. The FDE wants to follow the source's verification method.

Select TWO options.

- A. Prioritize claims with consequential stakes, reversibility, audience, or regulatory exposure
- B. Open the supporting source and find the sentence behind a material claim
- C. Check every sentence equally
- D. Treat a citation as verification without opening it

Correct Answer: A & B

Section B — Answer Key

21. A & C 22. A & C 23. A & B 24. A & B 25. A & B 26. A & B 27. A & C 28. A & B

Section C — Detailed Table-Based MCQs (29–35)

29. A delivery team is designing a brief for an assistant to compare three training programs. The result must be reusable by a colleague; the assistant may choose sources, but the team keeps final acceptance. Evaluate which brief structure gives enough direction while leaving routine method choices open.

Factor	Current Situation	Evidence/Constraint	Implication
Outcome	Three programs compared	Result must be identifiable	State what should exist
Context	Audience and experience supplied	Assistant lacks unstated background	Include relevant background
Authority	Assistant may choose sources	Team keeps acceptance	State independent/reserved decisions
Deliverable	Colleague needs reusable output	Table and links required	Specify usable form
Verification	Important claims checked	Team inspects material claims	Write checks before run

Question: Which complete set of brief elements is represented?

- A. Outcome, Context, Constraints, Authority, Deliverable, Verification
- B. Prompt, Model, Tokens, API, Deployment, Memory
- C. Question, Search, Draft, Publish, Archive, Delete
- D. Source, Browser, Connector, Project, Schedule, Memory

Correct Answer: A

30. An FDE is reviewing a current course price. The claim matters because the recommendation depends on it and the price can change. The assistant provided a citation, but the FDE wants to verify whether the evidence supports the claim.

Factor	Current Situation	Evidence/Constraint	Implication
Claim	Current price	May change	Treat as material
Source	Page linked	Link alone is not proof	Open it
Support	Sentence required	Claim must be traceable	Find sentence
Freshness	Date matters	Old information may be stale	Check date
Decision	Evidence may be incomplete	Several outcomes possible	Choose evidence-based decision

Question: What should occur before accepting the price claim?

- A. Open page, find supporting sentence, and check date
- B. Accept because citation exists
- C. Replace with estimate
- D. Ignore source

Correct Answer: A

31. A company wants an assistant to summarize a supplied policy excerpt. Outside knowledge is prohibited; each answer must be traceable. If the excerpt is silent, the assistant must say so.

Factor	Current Situation	Evidence/Constraint	Implication
Source boundary	Only supplied excerpt	Outside knowledge excluded	Restrict answers
Traceability	Each answer supported	Supporting sentence visible	Quote sentence used
Missing information	Some questions unanswered	Source silence matters	Use 'not in the source'
Privacy	Text contains identifiers	Private details should not be pasted unchanged	Remove private details

Question: Which instruction set matches the table?

- A. Use only the text, quote the sentence, and say 'not in the source' when absent
- B. Use source then fill gaps from memory
- C. Answer every question
- D. Summarize freely without quotations

Correct Answer: A

32. A team runs the same report weekly with nearly identical background and output requirements. Staff re-enter the same source and standing rule each time.

They want to reduce setup without treating stored context as automatically correct.

Factor	Current Situation	Evidence/Constraint	Implication
Frequency	Same report weekly	Task repeats	Consider persistent setup
Background	Same reference material	Source reused	Project knowledge can hold it
Rule	Same standing instruction	Rule does not change	Project standing instruction can hold it
Current facts	Prices and dates change	Stored material can stale	Verify current claims
Accountability	Team accepts result	AI does not own acceptance	Human remains responsible

Question: Which setup best matches the course?

- A. Put recurring sources in Project knowledge and rules in standing instructions, while still checking current claims
- B. Put all outputs into permanent knowledge and stop review
- C. Use a Project only for current prices
- D. Replace Project with a longer prompt

Correct Answer: A

33. An AI job is drifting toward a different objective. It is not yet factually wrong, and most of the work remains useful. The FDE wants the smallest useful message and then wants to prevent recurrence.

Factor	Current Situation	Evidence/Constraint	Implication
Symptom	Wrong objective direction	Not yet factual error	Use directional correction
Scope	Most work useful	Full rewrite unnecessary	Choose smallest move
Intervention	Desired direction known	No need to restate job	Redirect
Aftercare	Cause can recur	Lesson should persist	Add learned line to brief

Question: What is the appropriate intervention?

- A. Redirect toward desired direction, then record the learned constraint/authority line
- B. Correct a nonexistent factual error
- C. Reject immediately
- D. Rewrite every instruction

Correct Answer: A

34. A final AI result contains a low-stakes wording choice, a client-facing financial calculation, and regulated information. Review time is limited.

The FDE must prioritize according to the course's thresholds and human-review requirements.

Factor	Current Situation	Evidence/Constraint	Implication
Internal wording	Low consequence	Easy to change	Lower priority
Financial calculation	Client-facing and material	Error costly	Must-check
Regulated information	Regulatory exposure	One threshold enough	Must-check
Public/legal statement	Lasting consequence possible	Named person should review	Human review required

Question: Which items should receive priority review?

- A. Financial calculation and regulated information, with required human review for public/legal category
- B. Only internal wording
- C. Only longest section
- D. None because AI verified

Correct Answer: A

35. Two assistants receive the same six-line brief unchanged. The FDE records completion, messages, authority handling, unverified marking, and deliverable differences.

The purpose is to understand the runs, not to create a permanent ranking.

Factor	Run 1	Run 2	Implication
Brief	Unchanged	Unchanged	Tests job portability
Completion	Finished	Finished	Both completed
Authority	Honored	Not honored	Run 2 has authority issue
Unverified marks	Present	Absent	Run 2 needs investigation
Ranking	Not requested	Not requested	Record observations, not ranking

Question: What is the appropriate conclusion?

- A. Run 2 shows specific handling differences to record and verify, not a permanent ranking
- B. Run 1 is permanently superior
- C. Any difference proves brief failure
- D. Run 2 can be accepted because it finished

Correct Answer: A**Section C — Answer Key****29. A 30. A 31. A 32. A 33. A 34. A 35. A**

Validation: exactly 35 questions (20 + 8 + 7); Section B has exactly two correct options per question; all Section C items contain guidance, a table, one concise question, four options, and one correct answer.
